TOOLS  
NETWORK

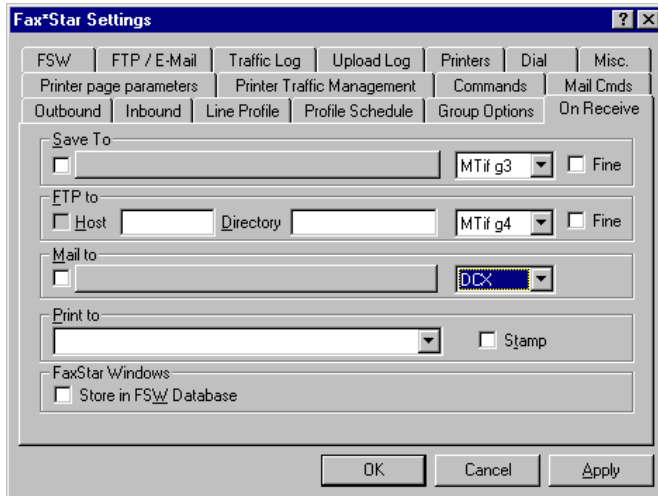

# FAX★STAR ADVANCED SERVER

From the control panel, the administrator can monitor the main Fax★Star Advanced Server components. This feature can be started from any PC on the network. The different windows display:

- The Fax traffic.
- The Mail traffic.
- The Main monitor displays any action performed by the server.
- The Printer File monitor displays every print file sent to a printer on the network.
- The incoming faxes monitor.

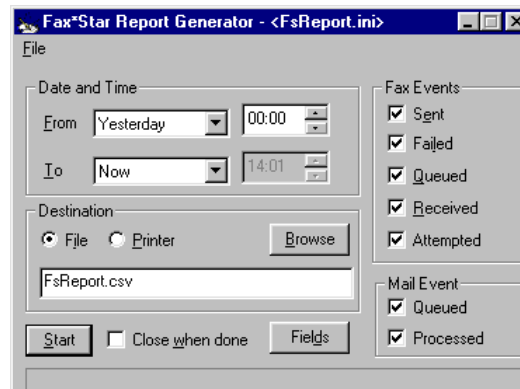

Users can select the level of data for every monitor they wish to see in the corresponding window.

The incoming fax setup allows defining at the user level:

- To keep a copy of incoming faxes in the server in a specific format.
- To mail a copy of incoming faxes in a specific format to a particular e-mail address.
- To send to another server via FTP a copy of incoming faxes in a specific format.
- To print incoming faxes on any printer on the network with a specific acknowledgment stamp.
- To forward incoming faxes to another fax number.
- To update the **Fax★Star Windows**

Users can print a report of the traffic. This report can also be created in a CSV file (to be imported to an Excel spreadsheet). Users may select fields they wish to include in this file.
