

IntelliJade

The Powerful Simple Portal & Business Intelligence Solution

The Business Intelligence Solution

IBM Server *Proven™*

IntelliJade Details

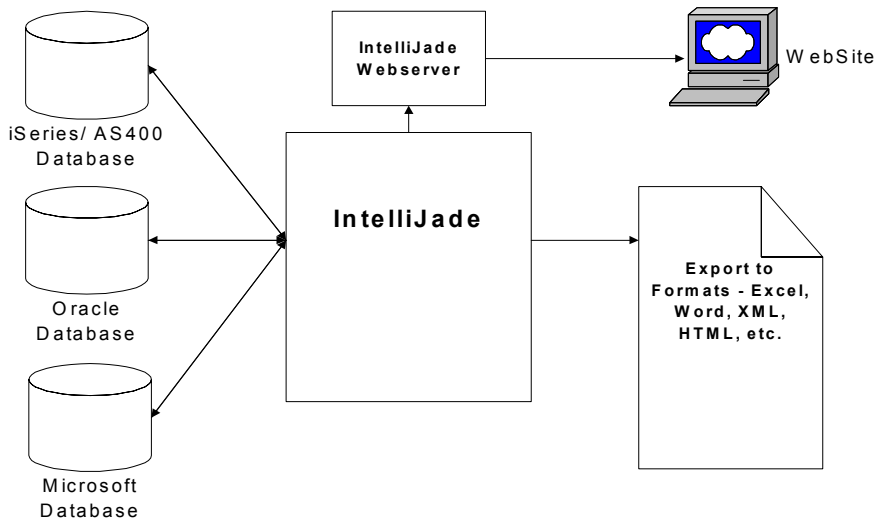

IntelliJade is a powerful tool, which will allow you to quickly access your data. The main goal of IntelliJade is to require from the user a minimum of actions to gain full performance in the analysis, production and restitution of the information regardless of the support desired (paper, files or web). IntelliJade for Business allows you to be connected with the major relational databases (Oracle, SQL server, DB2-400, Access).

Multi-Connection

Usually, it requires a great deal of configuration before it is possible to access data from different databases. Within itself, IntelliJade has a driver for iSeries/400, without installing anything on the iSeries/400! With OLE DB functionalities built-in IntelliJade, you can access the other major Databases on the market.

Data Query Creation

Users can be defined in groups and you can set privileges to a particular element such as queries, data models, etc. IntelliJade presents you the list of tables and views in your database. You can filter the list for an easy access to your frequently used tables. With Drag-And-Drop, you can create links between with the fields you have defined. Data models can be saved on your server for further use, or to share among other users. IntelliJade allows all the Following :

- ★ Can manage DB2 on iSeries/400 and other major databases like Oracle or MS SQL Server.
- ★ Has ability to manipulate tables and create relationships.
- ★ Allows the ability to filter and sort your data.
- ★ Able to export the results in many popular file formats, like Excel, Word, XML, HTML, CSV, etc..
- ★ Ability to share functionality with others by web access.

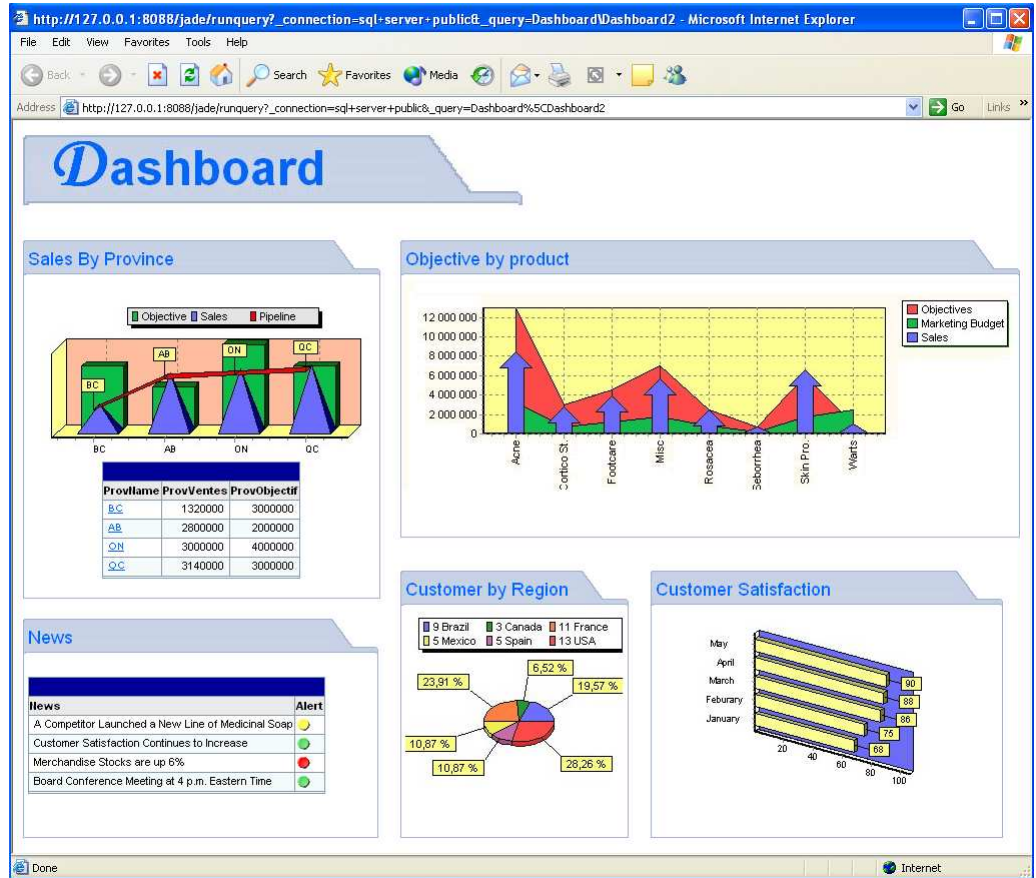

Business Intelligence & Fax / Email Automation

"Because Time Is Money & Data is Gold"

IntelliJade

Rapid and Seamless Integration

- ★ **Intuitive Web Interface**
- ★ **Ties in to production databases or data warehouse**
- ★ **Easy to manage, adapts easily to new needs**
- ★ **Can be used along side systems already in place**
- ★ **Get Access to all your data, from one screen**
- ★ **IntelliJade already has its own iSeries/400 driver**
- ★ **Implement according to your needs**

Publish all pertinent information from a single point of entry by the WEB

Efficient communication of the correct information to the right party is a key factor to success. IntelliJade is a web server, which executes requests within various databases and publishes the results in a instant manner in the HTML format, on Intranet or Internet with refreshed data at each viewing. As it replaces paper reports and as it does so without specialized developers, IntelliJade provides a quick return on investment. With results in near realtime, decision-making is timely.
